

TAKING MEDICINE TO PREVENT STROKE

It's a no-brainer!

5x

An irregular heartbeat known as atrial fibrillation can cause blood clots and increase the risk of stroke five-fold

70%

Anticoagulant medicine helps prevent blood clots and reduce the risk of stroke by up to 70%

millions

Anticoagulants have been safely used by millions of people, with stroke prevention benefits far outweighing the risk of side-effects, including bleeding
